**Incorrect specification of the allowed battery type for use in the UK2AAA eLED PEN I-ETB**

Assamstadt, June 9<sup>th</sup>. 2022

Dear Customer/End User,

The following is important information regarding the correct type of Energizer battery that is allowed to be used in the Intrinsically Safe Pen-Shaped Flashlight (hand light) - UK2AAA eLED PEN I-ETB.

ECOM Instruments GmbH has been informed by Eurofins Electrical & Electronic Product Testing AG, the notified body responsible for the certification of the UK2AAA eLED PEN I-ETB under ATEX certificate SEV 11 ATEX 0174 X (Issue 3), that a typographical error exists in the certificate regarding the specification of the correct type of Energizer battery allowed for use with the product. The listed Energizer battery type "Energizer+" should be "Energizer Industrial AAA". This is listed in the table in section 15 of the certificate under Rating.

This typographical error in the batteries table listed on the certificate that will be corrected at the next update of the certificate.

Yours faithfully,

Rolf Wessels  
CEO – ECOM Instruments GmbH

Kevin Spence  
Head of Approvals – ECOM Instruments GmbH
